
Intro to the course

02476 Machine Learning Operations
Nicki Skafted Detlefsen

Who am I

- Bachelor, master, PhD from DTU
- Currently: Postdoc
- Old focus:
 - Inductive biases in deep learning
 - Generative models
 - Geometry aware manifolds
- New focus:
 - MLOps
 - Efficient machine learning

Who am I

- Eager open-source contributor
 - This course is open-source

- ML Engineer at <https://lightning.ai/>

Nicki Skaftes Detlefsen
SkaftesNicki

Postdoc at section for Cognitive Systems (CogSys), Technical University of Denmark (DTU). Main focus: Generative models and geometrical deep learning.

Course settings

- 5 ECTS
 - 3 weeks period
 - Level: Master
 - Grade Pass/not passed
 - Type of assessment:
 - Code hand-in
 - Weekly project updates
 - Final oral examination
- Recommended prerequisite
 - General understanding of machine learning (datasets, probability, classifiers, overfitting etc.)
 - Basic knowledge about deep learning (backpropagation, convolutional neural network, auto-encoders etc.)
 - Coding in Pytorch

What is this course/What it is not

What is this course:

Introduce the student to a number of coding practices that will help them organization, scale, monitor and deploy machine learning models either in a research or production setting. To provide hands-on experience with a number of frameworks, both local and in the cloud, for doing large scale machine learning models.

Keywords:

- Organization
- Scalability
- Reproducibility
- Hands-on experience

What this course is not:

- How different machine learning models works

What do I expect from you

The course is centered around two principals:

- Learning by doing
- Learning by exploration-exploitation

We provide lectures, exercises and guidance but encourage self study.

Organisation of material

- 1 day = 1 session (S)
- 1 session = multiple modules (M)
- Core modules:
 - Essential in some way
- All other modules are highly recommend
- S10 contains additional modules

[Homepage](#)
[Timeplan](#)
[S1 - Development environment](#)
[M1 - Terminal](#)
[M2 - Conda](#)
[M3 - Editor](#)
[M4 - Deep Learning Software](#)
[S2 - Organization and version control](#)
[S3 - Reproduceability](#)

IMPORTANT

Core module

What I hope from this course

- Have fun!
- That you get to fill your toolbox with useful frameworks
- (Maybe) Learn something along the way

People with no idea
about AI, telling me my
AI will destroy the world

Me wondering why my
neural network is
classifying a cat as a dog..

hygge

[huc-gah] *noun*

An atmosphere of warmth, wellbeing, and cosiness when you feel at peace and able to enjoy simple pleasures and being in the moment.

A typical day in this course

Exercise days:

- Meet in at 9:00
- Lecture for 15-30 mins
 - I am still learning how to do lectures
 - Lectures are not meant to give teach you anything, but provide some context to the topic of the day
- Exercises until 14:00-17:00
 - Remember to take a lunch break
 - Workload will depend on you

Project days

- Sometimes a small lecture or company presentation
- Rest of the day you work on projects
- Office hour (may be virtual)

Projects

- Approximately 1/3 of the course time is spend on project work
- More info here: https://skaftenicki.github.io/dtu_mlops/projects
- Already now you are recommended to think about forming groups
 - 4 people (3 and 5 is also acceptable)
 - Thursday we will do some speed dating to form groups for people not already having one.
 - Also feel free to write in the *#find-a-group* slack channel.

Exam

Due to increase in students the exam format has been changed.

Two parts:

1. Written part: An template with ~30 questions that you can fill out as you work on your projects. It will be part of your project Github repository.
2. Oral part: 5 min per group, you get to show us a running demo of your project. Probably quick question for all members.

More on this on Friday.
